

Do you have questions on storing Betaferon®?

Here we will provide you with all the information you need to make sure you are handling and storing your Betaferon® safely and properly.

Can you really store Betaferon® outside the fridge and for how long?

Yes, you can store Betaferon® outside the fridge for two years at room temperature (this means up to 25°C). We now have valid data which show, **Betaferon® is stable for two years off the cool chain.**

How and for how long can you store Betaferon® after reconstitution?

The reconstituted injection should be administered immediately.

If the injecting has to be delayed, refrigerate and inject Betaferon® within 3 hours. Do not freeze.
